Idea Generation

“Turning employees from the weakest link to the first line of defense.”

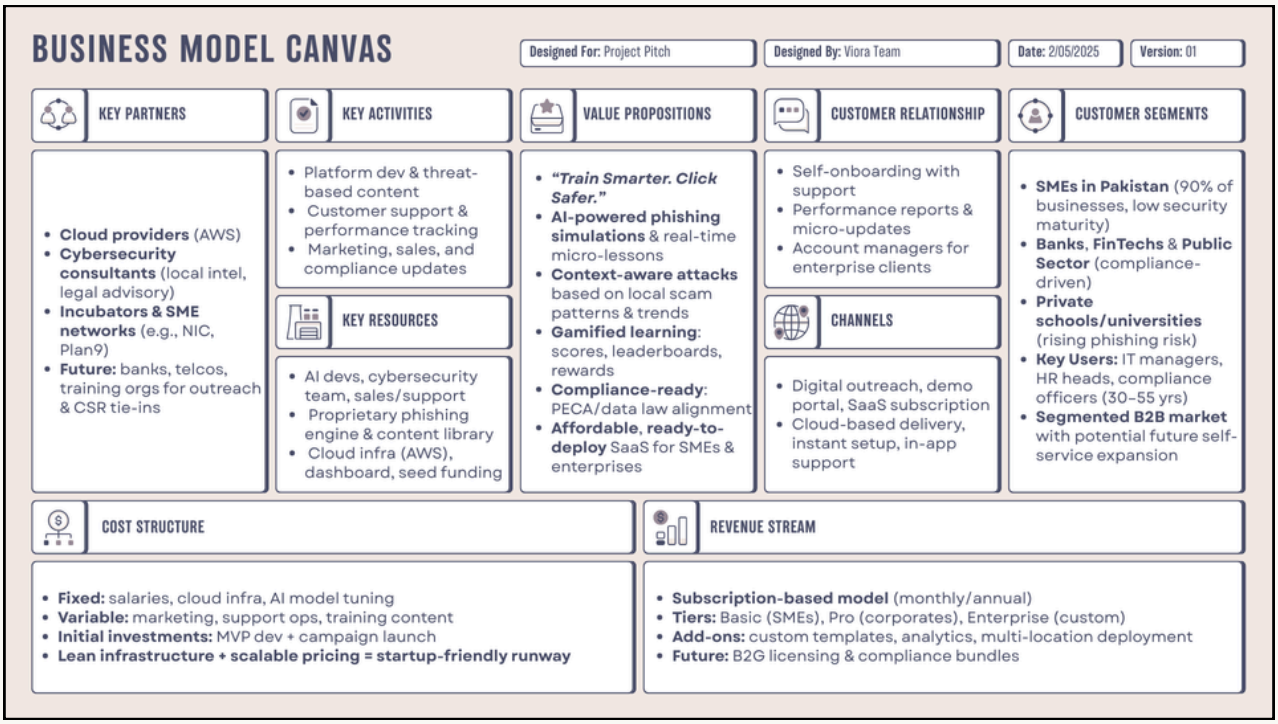
In today’s digital-first Pakistan, phishing scams are no longer just annoying — they’re catastrophic. Picture a finance associate at a Karachi-based SME receiving an email during bonus season, seemingly from HR, asking for banking verification. **One click**, and the company’s finances are compromised. This isn’t fiction. It’s the everyday reality of cyber threats in Pakistan.

Phishing is evolving. It’s leveraging AI, mimicking local brands, and bypassing traditional defenses. The FIA reported that over **60% of cybercrime complaints in 2024** were phishing-related. Smishing alone cost Pakistan over **PKR 50 million last year**. Traditional training tools — passive workshops and generic advisories — have proven ineffective, especially for SMEs that lack cybersecurity infrastructure.

This is where Viora AI plays its part.
Viora AI is a real-time, AI-powered phishing simulation and gamified training platform tailored to the Pakistani market. It sends context-aware, adaptive phishing simulations to employees and delivers instant micro-lessons after each click. Employees earn scores, ranks, and rewards — turning security awareness into an engaging, continuous journey.

With dashboards providing compliance status, risk scores, and behavioral insights, Viora AI isn’t just another training tool. It’s the foundation for a human-centric, security-first culture.

Business Model Canvas



To visualize the strategic foundation of Viora AI, we've developed a **Business Model Canvas (BMC)**. This framework outlines how the startup creates, delivers, and captures value — highlighting key areas like customer segments, value propositions, and revenue streams. It offers a clear snapshot of our solution's structure, tailored specifically for the cybersecurity needs of Pakistan's digital ecosystem.

From targeting SMEs and enterprises to delivering gamified, compliance-ready training through a scalable SaaS model, the BMC captures the essence of Viora AI's business strategy. The following diagram summarizes this model at a glance.

Competitive Analysis

Feature/Criteira	KnowBe4	Cofense	CyberSafe PK	Viora
AI-Driven Simulations	Limited	Pre-built templates	None	Adaptive AI generated phishing based on trends
Localization, Gamification & Rewards	Global focus only	Not localized	Partial Urdu support	Fully localized content, attacks, & training
Compliance Support (PECA)	None	None	None	Engaging leaderboards, points, and micro-rewards
Real-time Micro-lessons	Delayed	Training is separate	No feedback loop	Instant bite sized training upon simulation fail
Pricing Accessibility	Expensive (Enterprise Level)	Mid-to high (USD based)	Low	Affordable tiers for SMEs & education sector

Viora AI stands out by being Pakistan-focused, adaptive, gamified, and built with compliance and affordability in mind. No other tool offers this blend locally.

Go-to-Market Strategy

Target Segments #01

- SMEs (underserved, high-risk)
- Enterprises (banking, telcos, healthcare)
- Government organizations (data-sensitive)
- Educational institutions (digital yet vulnerable)

Marketing Tactics #02

- Targeted LinkedIn and Meta ads to IT/HR leads
- Cybersecurity webinars, phishing reports, simulation challenges
- Free demos and dashboard previews
- Outreach via incubators, EdTech platforms, training partners
- Future: referral programs, white-labeled partnerships

Sales Enablement #03

- 100% digital self-service onboarding
- Tiered pricing + enterprise account managers

Viora AI's GTM plan combines local relevance with digital reach, enabling agile market penetration.

Financial Viability

Revenue Projection

2025	2026	2027
PKR 1.8M (20 clients)	PKR 12M (100 clients)	PKR 30.55M (250 clients)

Expense Forecast

2025	2026	2027
PKR 2.8M	PKR 5.0M	PKR 7.25M

BREAK-EVEN IN YEAR 2 **2026**

Initial Investment recouped in 2 years; Profits from 3rd year onwards.

Funding Need

PKR 3–5M seed round to cover:

- MVP development
- Initial campaigns
- Infrastructure and staffing

Risk Assessment →

01. Technical Risks

- Irrelevant AI outputs → Use feedback loop + expert curation
- Downtime → Use cloud redundancy, backups

02. Legal Risks

- Data privacy violations → Anonymize, limit data, comply with PDPA
- IP issues → Use original content + audit trails

03. Market Risks

- Global competitors enter → Focus on localization and partnerships
- Low SME awareness → Run freemium trials, webinars, local case studies

Conclusion

Viora AI is structured to anticipate, address, and adapt to challenges, while creating long-term value for both customers and investors.
